

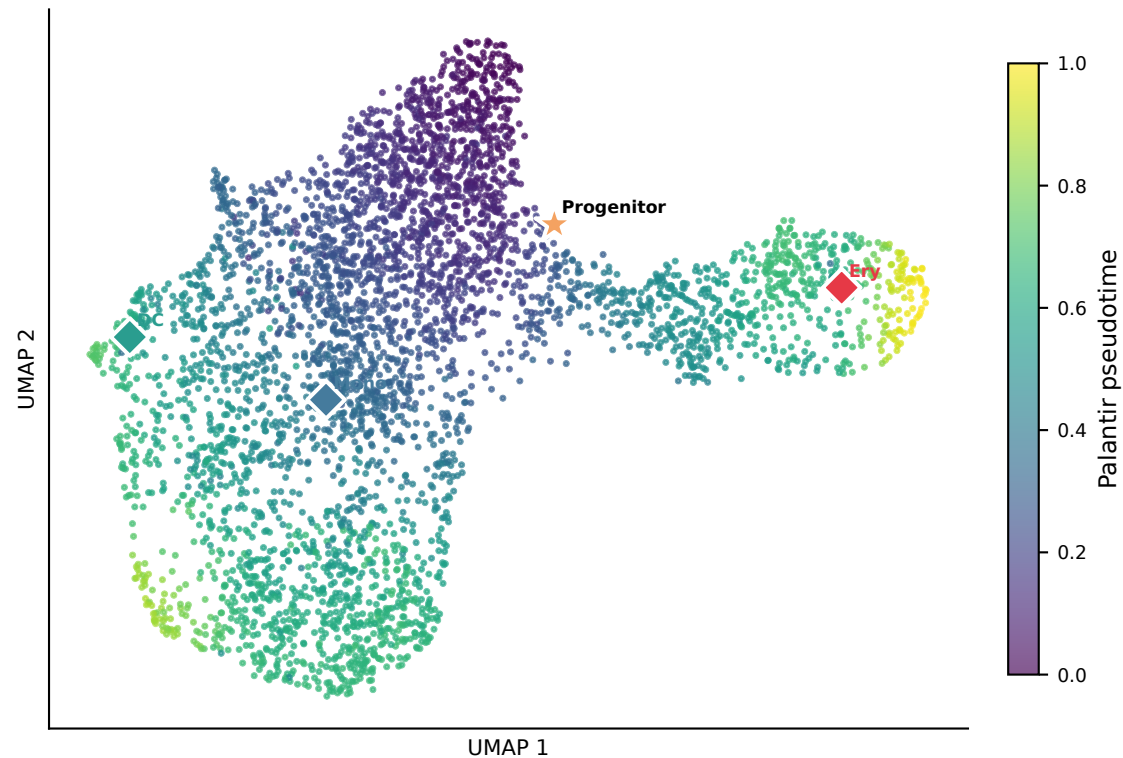

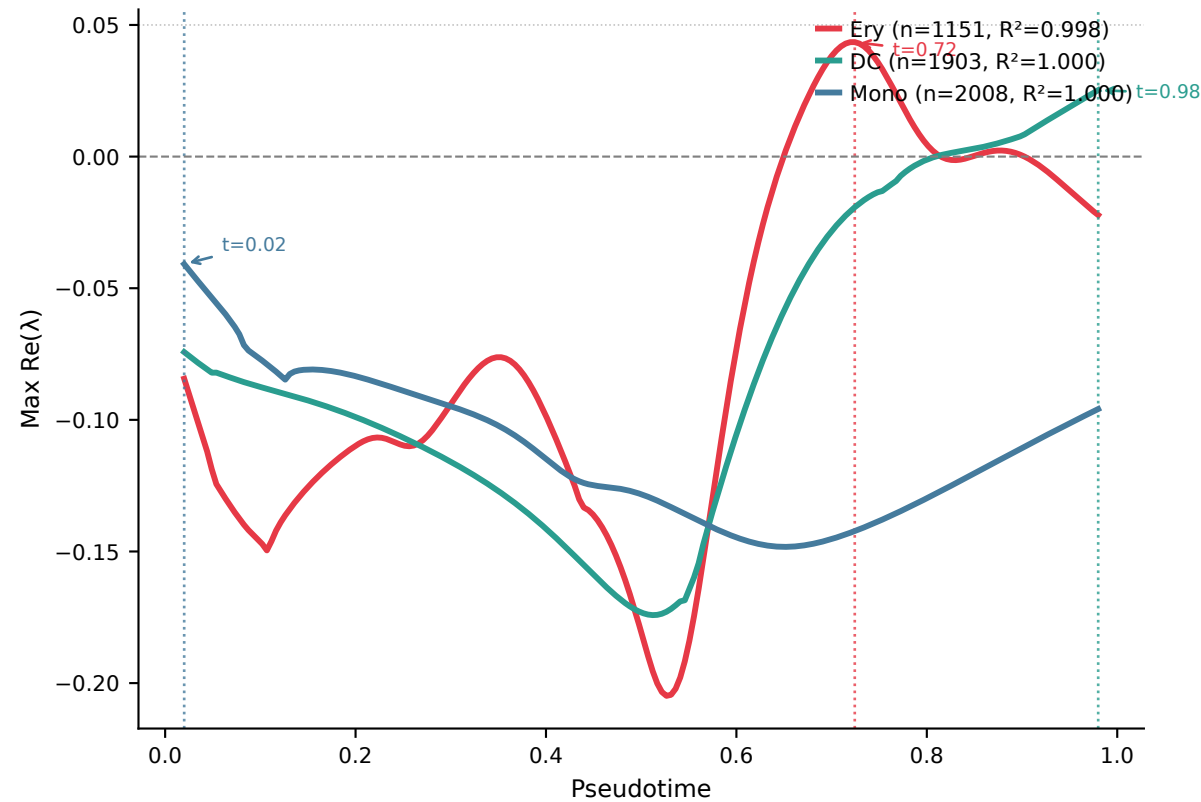

Figure 3 (FA) | Bone Marrow Hematopoiesis — Branch-Separated scJDO

FactorAnalysis (30-D) + UMAP + Palantir pseudotime + biology-informed drift fields | Ery $R^2=0.998$ DC $R^2=1.000$ Mono $R^2=1.000$

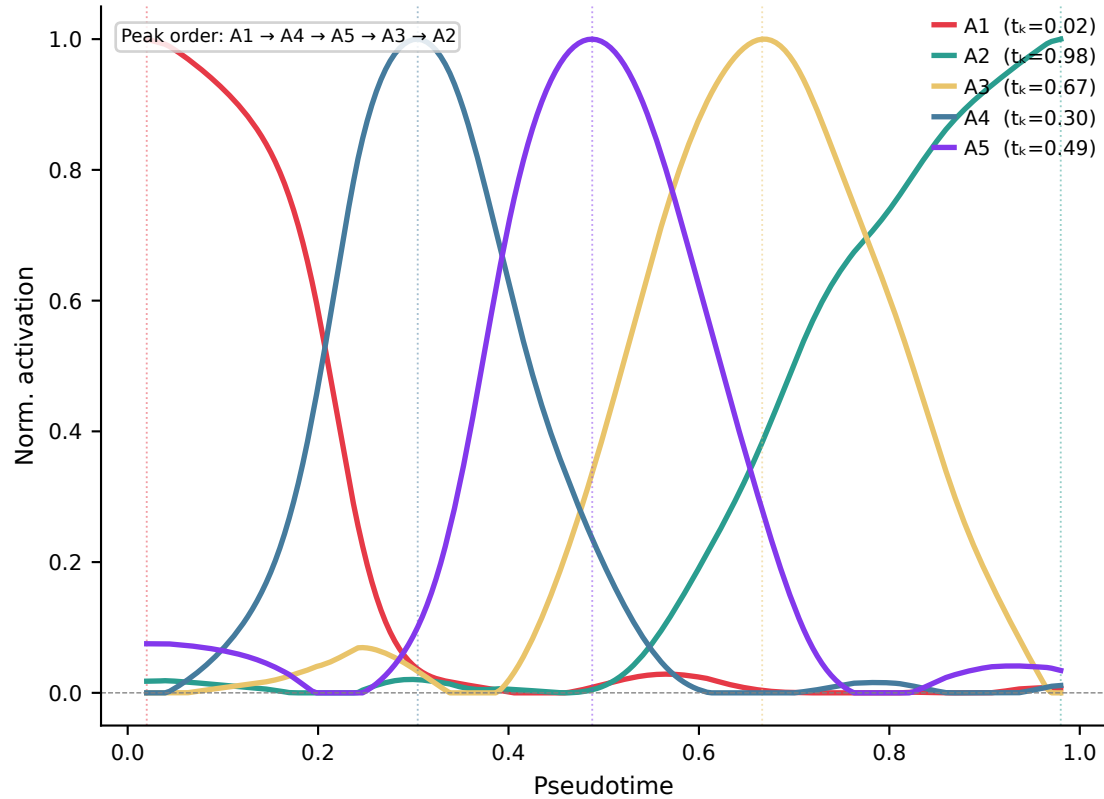

a | Palantir trajectory — Bone Marrow (4,142 cells)

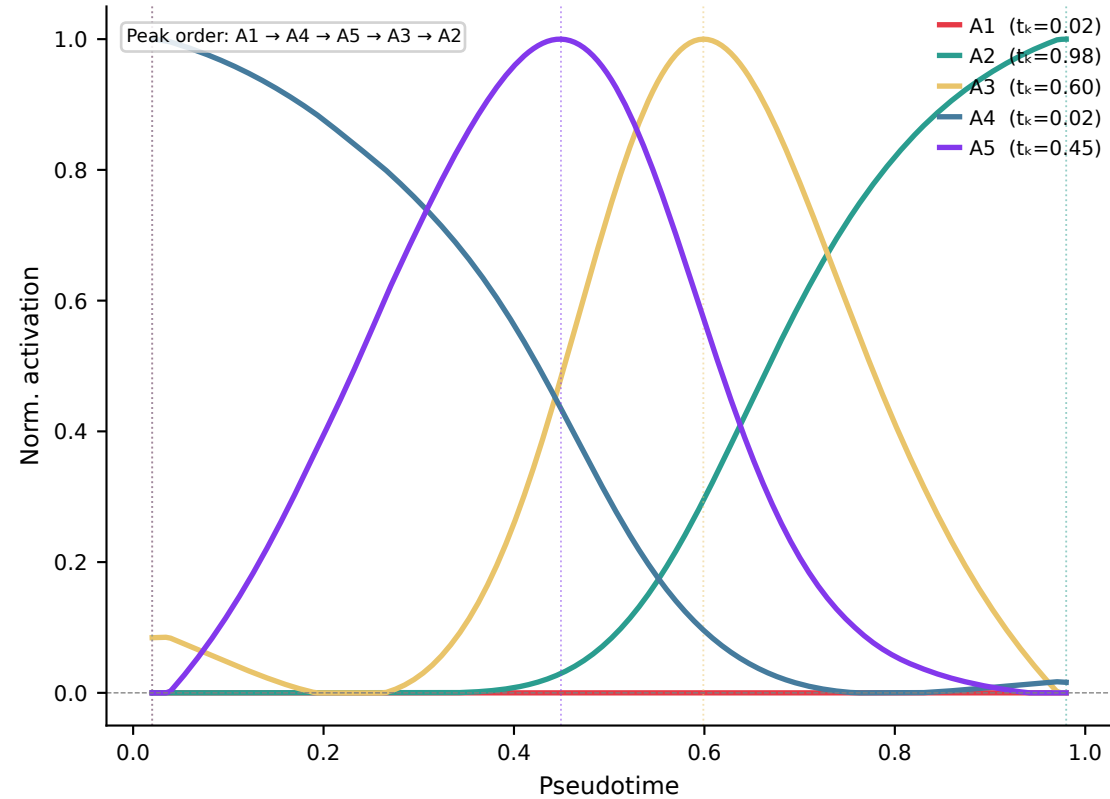

b | Local sensitivity — Ery vs DC vs Mono

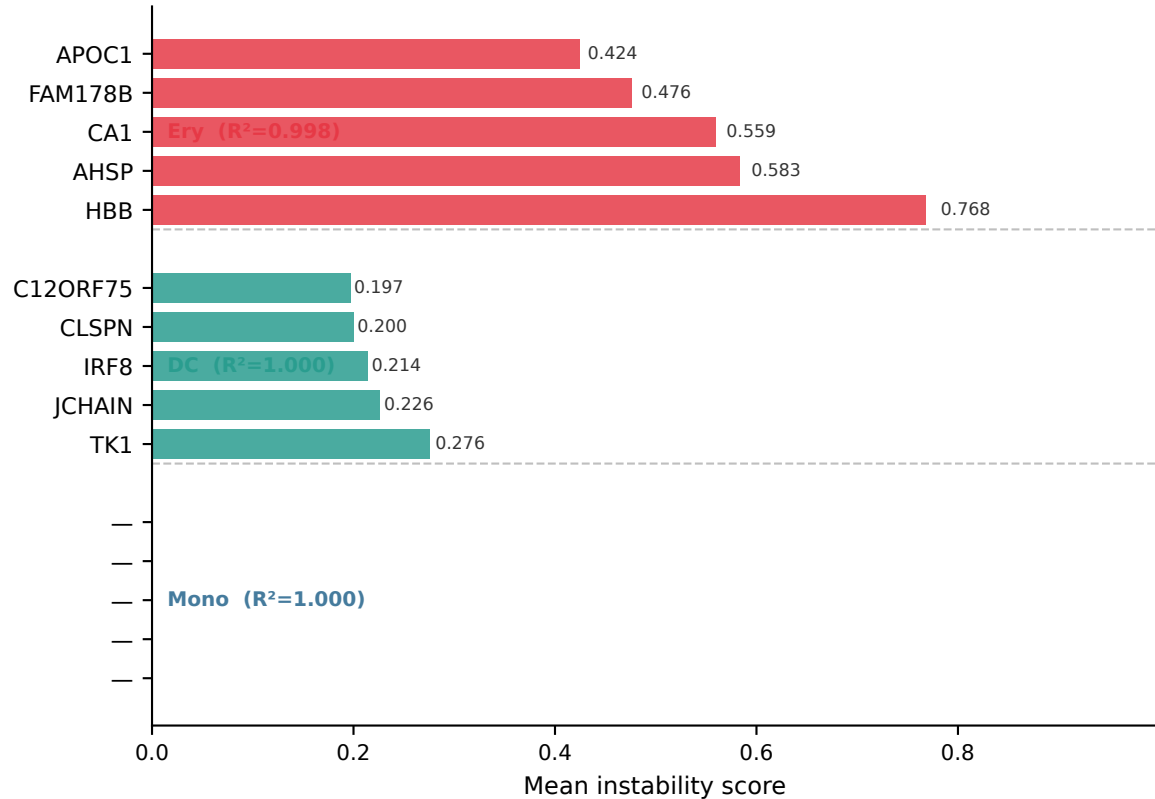

c | Ery archetypes (K=5, $R^2=0.998$, n=1151)

d | DC archetypes (K=5, $R^2=1.000$, n=1903)

e | Top instability genes — Ery / DC / Mono

f | Mono archetypes (K=5, $R^2=1.000$, n=2008)
